Global X MLP ETF Funds

Energy MLPs are owners and operators of key pieces of infrastructure involved in the transportation, storage, and processing supply chain of these natural resources. As a result, MLPs are likely to benefit from continued energy output growth and additional investment in U.S. energy infrastructure.

Global X has two MLP ETFs to help investors gain exposure to this sector. Due to the nuanced tax structure of MLPs and the ETFs that provide exposure to MLPs, it is important to carefully consider the differences between each MLP ETF. For more detailed information, please refer to each fund's prospectus, investment case, and the MLP Taxation Primer.

	MLPA Global X MLP ETF	**MLPX** Global X MLP & Energy Infrastructure ETF
Exposure[1]	Large Cap MLPs	MLPs, MLP affiliates (including General Partners of MLPs, and energy infrastructure corporations.
Potential Uses	· Accessing high yield potential · Exposure to Large Cap MLPs · Avoiding K-1 tax forms	· Capturing the potential price appreciation of MLPs and other midstream energy infrastructure companies
Distinct Features	MLPA's expense ratio is nearly 30% lower than the industry average.*	MLPX avoids taxation at the fund level by limiting MLP exposure to under 25% of the fund, while accessing highly correlated GPs and other energy infrastructure companies
Taxed at Fund-level	Yes	No
K-1s	No	No
30-Day SEC Yield**	24.43%	15.76%

*Expense ratio was 29.6% lower than the industry average net expense ratio as of 3/31/20, per ETF.com (category: Niche = 'MLPs', exclude 'Active' & 'ETNs').

**30 Day SEC Yield as of March 31, 2020. To read the Prospectus for more information, please visit globalxfunds.com/MLPA, and globalxfunds.com/MLPX.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please call 1-888-493-8631, or visit globalxetfs.com. Performance is annualized for all funds greater than one year old while performance is cumulative for those less than one year old.

* Index performance shown represents the Hybrid Solactive MLP Infrastructure Index which consists of the Solactive MLP Composite Index from the inception of the Fund through March 31, 2015, and the Solactive MLP Infrastructure Index going forward.

[1] MLPA is classified for federal income tax purposes as a taxable regular corporation or so-called Subchapter "C"corporation. As a "C" corporation, MLPA accrues a deferred tax liability for their future tax liability associated with the capital appreciation of their investments and the distributions received by MLPA on equity securities of master limited partnerships considered to be a return of capital and for any net operating gains. MLPA's accrued deferred tax liability, if any, is reflected each day in MLPA's net asset value per share. The deferred income tax expense/(benefit) represents an estimate of the MLPA's potential tax expense/(benefit) if it were to recognize the unrealized gains/(losses) in the portfolio. An estimate of deferred income tax expense/(benefit) is dependent upon MLPA's net investment income/(loss) and realized and unrealized gains/(losses) on investments and such expenses may vary greatly from year to year and from day to day depending on the nature of MLPA's investments, the performance of those investments and general market conditions. Therefore, any estimate of deferred income tax expense/(benefit) cannot be reliably predicted from year to year. MLPX has different tax implications as it is not structured as a C-Corp, but a RIC.

[2] MLPA had an accrued state franchise tax liability for the year ended November 30, 2019. State franchise taxes are separate and distinct from state income taxes. State franchise taxes are imposed on a corporation for the right to conduct business in the state and typically are based off the net worth or capital apportioned to a state. Due to the nature of MLPA's investments, MLPA may be required to file franchise state returns in several states.

INDEX DEFINITIONS

MLPAMID	The Solactive MLP Infrastructure Index is intended to give investors a means of tracking the performance of the energy infrastructure MLP asset class in the United States.
SOLMLPX	The Solactive MLP & Energy Infrastructure Index is intended to give investors a means of tracking the performance of MLPs and energy infrastructure corporations.

Investing involves risk including loss of principal. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Investments in securities of MLPs involve risk that differ from investments in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP. MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). The funds invest in the energy industry, which entails significant risk and volatility. In addition, MLPA, and MLPX are non-diversified which represents a heightened risk to investors. Furthermore, MLPA, and MLPX invest in small and mid-capitalization companies, which pose greater risks than large companies. There is no guarantee distributions will be made and dividends may be reduced or eliminated at any time. The potential tax benefits from investing in MLPs depend on them being treated as partnerships for federal tax purposes. MLPA are taxed as regular corporations for federal income tax purposes, which differs from most investment companies. The amount of taxes currently paid by MLPA will vary depending on the amount of income and gains derived from MLP interests and such taxes will reduce an investor's return from an investment in the funds. MLPA will accrue deferred income taxes for any future tax liability associated with certain MLP interests. Upon the sale of an MLP security, MLPA may be liable for previously deferred taxes which may increase expenses and lower the fund's NAV.

The Funds have a different and more complex tax structure than traditional ETFs and investors should consider carefully the significant tax implications of an investment.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Market price returns are based upon the midpoint of the bid/ask spread at the close of the exchange and does not represent the returns an investor would receive if shares were trade at other times. Brokerage commissions will reduce returns. NAVs are calculated using prices as of 4:00 PM Eastern Time.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting globalxETFs.com. Read the prospectus carefully before investing.

Global X Management Company, LLC serves as an advisor to the Global X Funds. The Global X Funds are distributed by SEI Investments Distribution Co., SIDCO (1 Freedom Valley Drive, Oaks, PA, 194560, which is not affiliated with Global X Management Company or any of its affiliates.

Indices are unmanaged and do not include the effect of fees. One cannot directly invest in an index.
