

KEY FEATURES

Invest in Values

CATH excludes companies involved in activities perceived to be inconsistent with Catholic values as set out by the U.S. Conference of Catholic Bishops, including screens for weaponry and child labor.

Minimize Tracking Error

By providing exposure only to companies engaged in activities consistent with Catholic beliefs (through the S&P 500[®] Catholic Values Index), CATH seeks to minimize tracking error by matching the sector weightings of the broader S&P 500[®].

ETF Efficiency

CATH allows investors to buy and sell a broad basket of U.S. equities that conform with Catholic guidelines, with the tax efficiency of an ETF.

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short term performance of the fund is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. Market price returns are based upon the midpoint of the bid/ask spread at the close of the exchange and do not represent the returns you would receive if you traded shares at other times. CATH SECTOR OVERWEIGHT/UNDERWEIGHT vs. S&P 500

DEFINITIONS

S&P 500 [®] Catholic Values Index	The S&P 500 [®] Catholic Values Index applies exclusion criteria to the constituents of the S&P 500 in order to create a benchmark aligned with Catholic values. These values are consistent with the Socially Responsible Investment Guidelines outlined by the United States Conference of Catholic Bishops (USCCB). The index is designed for investors who wish to track a benchmark that is consistent with USCCB guidelines.
S&P 500 Index	S&P 500 Index tracks the performance of 500 leading U.S. stocks and captures approximately 80% coverage of available U.S. market capitalization. It is widely regarded as the best single gauge of large-cap U.S. equities.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.
