

# Global X Covered Call ETF Suite

For the last decade, income investors have struggled to find diversified sources of meaningful income for their portfolios. Amid a historically low interest rate environment, traditional sources of income, like bonds, often failed to meet investors' income needs. At the same time, lengthening life expectancies and desires for preserving multi-generational wealth have tilted investors' preferences towards more growth-oriented solutions.

Global X's Covered Call suite of ETFs invest in the underlying securities of an index and sell call options on that index. These strategies are designed to provide investors with an alternative source of income, while offering unique sources of risks and returns to an income-oriented portfolio.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject the funds to loss due to adverse occurrences that may affect that industry or sector. Investors in the funds should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

The funds engage in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset, in this case U.S. common equities, and writing a call option on that same asset with the goal of realizing additional income from the option premium. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price, but continues to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price. QYLD, QYLG, XYLD, XLYG and RYLD are non-diversified.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

**Carefully consider the Fund's investment objectives, risks, and charges and expenses before investing. This and other information can be found in the Fund's summary or full prospectuses, which may be obtained at [globalxetfs.com](http://globalxetfs.com). Please read the prospectus carefully before investing.**
