The Global X SuperDividend® U.S. ETF (DIV) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Indxx SuperDividend® U.S. Low Volatility Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

INDXX SUPERDIVIDEND® U.S. LOW VOLATILITY INDEX

SELECTION

- The index is designed to track the performance of securities of companies in the United States that have a high dividend yield and low beta.
- Companies are only eligible for inclusion if they fulfill the following requirements:
  - Beta lower than or equal to 0.85, with respect to the local country benchmark.
  - 12-month dividend yield larger than 1% and lower than 20%.
  - Consistent dividend payments in the last two years.
  - Current year dividend greater or equal to 50% of the previous year.
- The top 50 companies by dividend yield will form the final index. Companies with official announcements on the Selection Day regarding cancellation or significant reductions in their dividend payments are excluded from the inclusion in the Top 50, and the next securities with highest dividend yield will be added.

SELECTION POOL

- Eligible companies must have:
  - Minimum Total Market Capitalization of $500 million.
  - Average Daily Turnover of at least $1 million over the last 6 months.
  - The security should be incorporated or primarily listed in the United States in the form of Common Stock, MLP or REIT securities.
  - Traded on 90% of the eligible trading days in the last 6 months.
  - Free Float percentage of total shares outstanding of at least 10%.

WEIGHTING AT SELECTION/REBALANCING

- Index components are equally weighted. The companies are also subject to the following constraints:
  - Each sector is subject to a maximum number of 12 constituents and a maximum weight of 25%.
  - MLPs are subject to a maximum number of 10 constituents and are capped at 20%.

REBALANCING

- The index follows an annual reconstitution and rebalancing schedule. Rebalances are made on a rolling rebalance schedule at the close of business on the last three trading days of February each year.
- The index follows a quarterly review wherein index components are screened for dividend cuts and an overall negative outlook concerning the companies’ dividend policy. The new portfolio becomes effective on the last trading day of May, August and November each year.
For more information on the Index, please visit Indxx’s website.

*For the complete and current index methodology please refer to the index provider’s website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

Beta: Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund’s investment objectives, risks, and charges and expenses. This and other information can be found in the fund’s full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. High yielding stocks are often speculative, high-risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund’s performance. The potential benefits of investing in MLPs depend on them being treated as partnerships for federal income tax purposes. Further, if the MLP is deemed to be a corporation then its income would be subject to federal taxation at the entity level, reducing the amount of cash available for distributions to the fund which could result in a reduction of the fund’s value. The risks associated with real estate investment trusts including interest rate risk which may cause certain REIT holdings to decline in value if interest rates increase. REITs are subject to general risks related to real estate including default risk and the possibility of decreasing property values.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index. There is no guarantee dividends will be paid.
