Global X Telemedicine & Digital Health ETF

REASONS TO CONSIDER

High Growth Potential
The global telemedicine market increased over 6% from 2021 to 2022, exceeding $75bn. Forecasts suggest the market could reach over $200bn by 2027.

Structural Tailwinds
In 2019, an estimated half of the global population lacked essential health care services. As more underserved markets gain broadband access, telemedicine offers vast opportunity to bridge the divide.

New Consumer Preferences
The pandemic increased adoption of digital health services, with many turning to telemedicine for the first time, accelerating the theme’s reach.

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor’s shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance, when observed, is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. Click here for standard performance as of the most recent quarter-end.

DEFINITIONS

Solactive Telemedicine & Digital Health Index

The Solactive Telemedicine & Digital Health Index seeks to invest in companies positioned to benefit from further advances in the field of digital health and telemedicine, as well as applications thereof, including those that connect physicians and patients digitally, that collect, produce, utilize, and/or store data for healthcare related statistical and/or computational analyses, including artificial intelligence analyses, and that develop healthcare devices which automatically transmit data and results to patients and/or physicians to assist in real-time, dynamic patient treatment and preventative care.

Investing involves risk, including the possible loss of principal. The investable universe of companies in which EDOC may invest may be limited. The Fund invests in securities of companies engaged in Health care and Information Technology sectors. These sectors can be affected by government regulations, rapid product obsolescence, intense industry competition and loss or impairment of patents or intellectual property rights. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. EDOC is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Carefully consider the Fund’s investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the Fund’s full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Beginning October 15, 2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn’t available, the midpoint between the national best bid and national best offer (“NBBO”) as of the time the ETF calculates current NAV per share. Prior to October 15, 2020, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time. The returns shown do not represent the returns you would receive if you traded shares at other times. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Since the Fund’s shares did not trade in the secondary market until several days after the Fund’s inception, for the period from inception to the first day of secondary market trading in Shares, the NAV of the Fund is used to calculate market returns.
