

### REASONS TO CONSIDER

#### High Growth Potential

Wages and purchasing power have risen throughout emerging markets (EM) at unprecedented rates. In 2022, EM economies accounted for 55% of global consumer spending – a segment that could exceed \$6tn annually by 2027.<sup>(1)</sup>

#### Experienced Portfolio Managers

EMC's portfolio managers have extensive track records in actively managed emerging market strategies.

#### ETF Efficiency

In a single trade, EMC delivers access to dozens of emerging market stocks across a range of sectors, along with the outperformance potential of active management.

<sup>(2)</sup>Effective May 12, 2023, the fund acquired the performance, financial, accounting and other historical information of the Mirae Asset Emerging Markets Fund. Performance shown prior to May 12, 2023 reflects the performance of the Mirae Asset Emerging Markets Fund's I shares. Market price returns prior to that date reflects the predecessor fund's NAV return.

Investing involves risk, including the possible loss of principal. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. A small number of companies and industries may represent a large portion of the market in a particular country or region, and these companies and industries can be sensitive to adverse social, political, economic or regulatory developments in that country or region.

EMC is actively managed, which could increase its transaction costs (thereby lowering its performance) and could increase the amount of taxes you owe by generating short-term gains, which may be taxed at a higher rate. Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time.
