Investing involves risk, including the possible loss of principal. In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors, as well as increased volatility and lower trading volume. Narrowly focused investments and investments focusing on a single country may be subject to higher volatility. There are additional risks associated with investing in base and precious metals as well as their respective mining industries. Investments in smaller companies typically exhibit higher volatility. High yield bonds involve greater risks of default or downgrade and are more volatile than investment grade securities, due to the speculative nature of their investments.

Technology-themed investments may be subject to rapid changes in technology, intense competition, rapid obsolescence of products and services, loss of intellectual property protections, evolving industry standards and frequent new product productions, and changes in business cycles and government regulation. There is no guarantee that the Funds will achieve their stated objectives.

**Carefully consider the funds' investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the funds' summary or full prospectus, available at [globalxetfs.com](https://globalxetfs.com). Please read the prospectus carefully before investing.**
