

### KEY FEATURES

#### Risk Management

ONOF is designed to maintain exposure to the equity markets when the trending environment is positive, and then move to a risk-off position when that trend reverses.

#### Four Signal Approach

ONOF incorporates moving average, convergence/divergence (MACD), drawdown, and volatility as indicators to shift between equity and fixed income exposure – each receiving an equal vote in the strategy.

#### Lessen Downside Risk

The strategy seeks to mitigate the extent of drawdowns while remaining invested in equities as much as possible.

### FUND DETAILS

Inception Date	01/12/2021
Underlying Index	Adaptive Wealth Strategies U.S. Risk Management Index
Number of Holdings	511
Assets Under Management	NA
Management Fee	0.39%

Annualized Volatility	-	-
Beta	-	-
Sharpe Ratio	-	-

## DEFINITIONS

Adaptive Wealth Strategies U.S. Risk Management Index	The Adaptive Wealth Strategies U.S. Risk Management Index is designed to dynamically allocate between either 100% exposure to the Solactive GBS United States 500 Index TR ("U.S. Equity Position") or 100% exposure to a portfolio of U.S. Treasuries with 1-3 years remaining to maturity ("U.S. Treasury Position"). The Solactive GBS United States 500 Index TR is a float-adjusted market capitalization weighted index which measures the performance of the equity securities of the 500 largest companies from the United States stock market across all sectors. A float-adjusted market capitalization weighted index weights each index component according to its market capitalization, using the number of shares that are readily available for purchase on the open market, rather than the total number of shares outstanding of an issuer. The Adaptive Wealth Strategies U.S. Risk Management Index seeks to provide exposure to the U.S. Equity Position during periods of normal equity market returns, and seeks to provide exposure to the U.S. Treasury Position prior to and during periods of adverse market conditions, as determined by the quantitative model developed by the Index Provider. The Adaptive Wealth Strategies U.S. Risk Management Index seeks to anticipate periods of adverse market conditions using quantitative signals (explained in further detail below) that have been developed based on historical data.
MSCI ACWI Index	MSCI ACWI Index captures large and mid cap representation across 23 Developed Markets (DM) and 24 Emerging Markets (EM) countries. The index covers approximately 85% of the global investable equity opportunity set. DM countries include: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the UK and the US. EM countries include: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Russia, Qatar, South Africa, Taiwan, Thailand, Turkey and United Arab Emirates.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.

Global X Management Company LLC serves as an advisor to the Global X Funds. The Funds are distributed by SEI Investments Distribution Co. (SIDCO, 1 Freedom Valley Drive, Oaks, PA, 19456), which is not affiliated with Global X Management Company, LLC or Mirae Asset Global Investments.

Investing involves risk, including the possible loss of principal. There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. The Fund is based on the "modern portfolio theory" approach to asset allocation, which is a framework for determining the allocation of a portfolio with the goal of achieving an intended investment outcome based on a given level of risk. This framework relies heavily on the anticipated volatilities, investment returns and correlations of particular asset classes or securities. There is no guarantee that the Underlying Index will outperform any alternative strategy that might be employed in respect of the component assets or that past volatilities and correlations of particular asset classes or securities will be indicative of future results. ONOF is non-diversified.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Global X Funds are not sponsored, endorsed, issued, sold or promoted by Adaptive Wealth Strategies® (AWS), nor does AWS make any representations regarding the advisability of investing in the Global X Funds. Neither SIDCO, Global X nor Mirae Asset Global Investments are affiliated with AWS.

Since the Fund's shares typically do not trade in the secondary market until several days after the Fund's inception, for the period from inception to the first day of secondary market trading in Shares, the NAV of the Fund is used to calculate market returns.

**Carefully consider the fund's investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the fund's full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting [globalxetfs.com](http://globalxetfs.com). Please read the prospectus carefully before investing.**
