

### REASONS TO CONSIDER

#### High Growth Potential

Forecasts suggest the global property technology (PropTech) market could reach \$94bn by 2030, a 3x increase from 2022.<sup>(1)</sup>

#### Structural Tailwinds

The real estate industry represents the largest store of wealth compared to any other financial asset class.<sup>(2)</sup> We believe the convergence of new technologies and emerging demographic trends make the sector ripe for disruption.

#### Unconstrained Approach

The universe of PropTech companies defies traditional categorization. PTEC invests accordingly, with global exposure across multiple sectors and industries.

## DEFINITIONS

Global X PropTech Index

The Underlying Index is designed to track the performance of property technology companies that are positioned to benefit from technology that optimizes the way people buy, sell, rent, design, construct, manage, and research/market residential and commercial properties.

(2) Based on a valuation of \$326.5tn per Savills Research, Sep 2021

Investing involves risk, including the possible loss of principal. PropTech companies are primarily exposed to the risks specific to the technology and real estate markets. Narrowly focused investments will be more susceptible to factors affecting that sector and subject to more volatility. Technology companies may be subject to rapid changes in technology, intense competition, rapid obsolescence of products and services, loss of intellectual property protections, evolving industry standards and frequent new product productions, and changes in business cycles and government regulation. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. PTEC is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Since the Fund's shares did not trade in the secondary market until several days after the Fund's inception, for the period from inception to the first day of secondary market trading in Shares, the NAV of the Fund is used to calculate market returns.
