

KEY FEATURES

Growth Potential

QCLR enables investors to participate in the growth of the Nasdaq 100, up to approximately 10% from the selling of the call to the options' expiration in three months.

Manage Risk

By employing a collar strategy, QCLR aims to lessen drawdowns to approximately -5% from the purchase of the put to the options' expiration in three months.

Efficient Options Execution

QCLR buys put options and sells call options on the Nasdaq 100, saving investors the time and potential expense of doing so individually.

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance of the Fund, when observed, is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. For performance data current to the most recent month end, please call 1-888-493-8631, or visit www.globalxetfs.com.

DEFINITIONS

Nasdaq-100 Quarterly Collar 95-110 Index	The Underlying Index measures the performance of a risk management strategy that holds the underlying stocks of the NASDAQ 100 Index and applies an options collar strategy (i.e., a mix of short (sold) call options and long (purchased) put options) on the Nasdaq 100 Index. The Underlying Index specifically reflects the performance of the component securities of the NASDAQ 100 Index, combined with a long position in 5% out-of-the-money ("OTM") put options and a short position in 10% OTM call options, each corresponding to the value of the portfolio of stocks in the NASDAQ 100 Index.
Nasdaq 100 Index	The Nasdaq-100 Index includes 100 of the largest domestic and international non-financial companies listed on The Nasdaq Stock Market based on market capitalization. The Index reflects companies across major industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology. It does not contain securities of financial companies including investment companies.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the Fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject QCLR to loss due to adverse occurrences that may affect that industry or sector. Investors in QCLR should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

QCLR engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A collar strategy involves holding shares of the underlying stock while simultaneously buying put options and selling call options against that holding. QCLR writes covered call index options on and purchases put options on the Nasdaq 100 Index. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price. By purchasing put options, in return for the payment of premiums, the Fund may be protected from a significant decline in the price of the Nasdaq 100 Index if the put options become in the money (Nasdaq 100 closes below the strike price as of the expiration date); but during periods where the Nasdaq 100 Index appreciates, the Fund will underperform due to the cost of the premiums paid. A liquid market may not exist for options held by the Fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price. QCLR is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Carefully consider the Fund's investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the Fund's full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
