**FUND OBJECTIVE**

The Global X SuperIncome™ Preferred ETF seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the S&P Enhanced Yield North American Preferred Stock Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

---

**S&P ENHANCED YIELD NORTH AMERICAN PREFERRED STOCK INDEX**

**SELECTION POOL**

- The underlying universe is all preferred securities in the S&P/TSX Preferred Share Index and the S&P U.S. Preferred Stock Index.
- The index is comprised of 50 of the highest yielding U.S. and Canada traded preferred stocks.
- Preferred stocks with total market capitalization of more than US$ 250 million are eligible.
- Preferred stocks that have traded a three-month average daily value traded (ADVT) of US$ 1 million are eligible for inclusion. Current index constituents must maintain a three-month ADVT of US$ 750,000 to remain eligible.
- Preferred stocks for which S&P Dow Jones Indices cannot determine indicated dividend yield are not eligible.
- The maximum number of lines per issuer is set to three (3) and a maximum index weight of 5% is set per issuer. In such a case, all three eligible issuer lines are included in the index and capped on a pro rata basis to a maximum of 5% for the issuer as a whole.
- Securities that meet the market capitalization, liquidity and yield criteria form the Selection Universe.

**RANKING**

- The top 25 highest yielding eligible preferred stocks are chosen. Current index constituents ranked within the top 75 remain in the index until the constituent count reaches 50. If, after including all eligible current constituents ranked within the top 75 the constituent count has not yet reached 50, the highest ranked eligible non-constituents are added in descending order until the target constituent count is reached.

**WEIGHTING AT SELECTION/REBALANCING**

- The index uses a capped market capitalization weighted scheme, with modifications made to index shares to prevent single issuer concentration and improve index liquidity.

**REBALANCING**

- Semi-annual. Third Friday in April and October.
For more information on the Index, please visit S&P’s website.

*For the complete and current index methodology please refer to the index provider’s website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund’s investment objectives, risks, and charges and expenses. This and other information can be found in the fund’s full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Preferred stock is subject to many of the risks associated with debt securities, including interest rate risk. In addition, preferred stock may not pay a dividend, an issuer may suspend payment of dividends on preferred stock at any time, and in certain situations, an issuer may call or redeem its preferred stock or convert it to common stock. High yielding stocks are often speculative, high-risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund’s performance. SPFF is non-diversified.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
