**FUND OBJECTIVE**

The Global X S&P 500 ESG Covered Call ETF (XYLE) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Cboe S&P 500 ESG BuyWrite Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

---

**Cboe S&P 500 ESG BuyWrite Index**

The Cboe S&P 500 ESG BuyWrite Index ("BXESG Index") with ticker symbol ‘BXESG’ measures the total rate of return of a hypothetical “covered call” strategy applied to the S&P 500 ESG Index ("SPESG Index"). This strategy consists of a hypothetical portfolio consisting of a “long” position indexed to SPESG Index on which are deemed sold a succession of one-month, at-the-money call options on the SPESG Index listed on the Cboe exchange.

**INDEX COMPONENTS**

The long S&P 500 ESG Index component and the short call option component are held in equal notional amounts, i.e., the short position in the call option is “covered” by the long SPESG Index component.

**S&P 500 ESG Index Component**

- Comprised of the constituents of the S&P 500 Index, which measures the total return of 500 leading companies listed in the US and meet specific sustainability criteria, while maintaining similar overall industry group weights as the S&P 500 Index.
- Follows the weighting scheme that governs the S&P 500 Index.
- Reconstituted annually on the last business day of April.
- Reviewed quarterly for ongoing eligibility on the third Friday in March, June, September, and December.
- Index constituents are reviewed on a quarterly basis for ongoing eligibility under the Business Activities and United Nations Global Compact (UNGC) exclusion criteria. Companies determined to be ineligible are removed from the index, effective after the close of the last business day of July, October, and January.

**“Covered Call” Option Component**

- The BXESG Index requires that each SPESG Index call option in the hypothetical portfolio be held to maturity, generally the third Friday of each month.
- The strike price of the new call option is the SPESG Index call option listed on the Cboe options exchange with the closest strike price at or above the last value of the SPESG Index reported before 11:00 a.m. ET.
  - For example, if the last SPESG Index value reported before 11:00 a.m. ET is 901.10 and the closest listed SPESG Index call option strike price at or above 901.10 is 905, then the 905 strike SPESG Index call option is selected as the new call option to be incorporated into the BXESG Index.
- Once the strike price of the new call option has been identified, the new call option is deemed sold at a price equal to the last non-zero bid price reported prior to 1:30 p.m. ET.
For more information on the Index, please visit Cboe’s website.

*For the complete and current index methodology please refer to the index provider’s website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

Notional amount refers to the total market value of securities or index value referenced by an option.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

**Carefully consider the fund’s investment objectives, risks, and charges and expenses before investing. This and other information can be found in the fund’s full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.**

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject XYLE to loss due to adverse occurrences that may affect that industry or sector. Investors in XYLE should be willing to accept a high degree of volatility in the price of the fund’s shares and the possibility of significant losses.

XYLE engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset, in this case U.S. common equities, and writing a call option on that same asset with the goal of realizing additional income from the option premium. XYLE writes covered call index options on the S&P 500 ESG Index. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price, but continues to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price.

Companies with favorable ESG attributes may underperform the stock market as a whole. As a result, the Fund may underperform other funds that do not screen companies based on ESG attributes. The criteria used to select companies for investment may result in the Fund investing in securities, industries or sectors that underperform the market as a whole, forgoing opportunities to invest in securities that might otherwise be advantageous to buy or underperform other funds screened for ESG standards.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
