The Global X S&P 500 Covered Call & Growth ETF (XYLG) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the CBOE S&P 500 Half BuyWrite Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

CBOE S&P 500 HALF BUYWRITE INDEX (TICKER: BXMH)

The CBOE S&P 500 Half BuyWrite (the “BXMH Index”) measures the total rate of return of a hypothetical “covered call” strategy applied to the S&P 500 Composite Price Index (the “S&P 500® Index”) that only writes half a unit of an at-the-money monthly Call option for every notional unit of the long position.

REBALANCES / REVIEWS

The “short” Covered Call Option component is held in half units of the long S&P 500 Index component’s notional amount.

- **S&P 500 Index Component**
  - Comprised of the constituents of the S&P 500 Index, which measures the total return of 500 leading companies listed in the US
  - Follows the weighting scheme that governs the S&P 500 Index
  - Reconstituted annually on the third Friday of September, as per the S&P 500 Index annual rebalance schedule
  - Reviewed for qualified new issue of common equities quarterly on the third Friday of March, June, September, and December as per the S&P 500 Index schedule

- **“Covered Call” Option Component**
  - Subsequent to the settlement of the expiring call option, a new at-the-money call option expiring in the next month is then deemed written, or sold, a transaction commonly referred to as a “roll”
  - The strike price of the new call option, which is the price the covered call option can be exercised at expiration, is the S&P 500 Index call option listed on the CBOE with the closest strike price at or above the last value of the S&P 500 Index reported before 11:00 a.m. ET
For more information on the Index, please visit CBOE’s website.

*For the complete and current index methodology please refer to the index provider’s website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

Notional amount refers to the total market value of securities or index value referenced by an option.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund’s investment objectives, risks, and charges and expenses. This and other information can be found in the fund’s full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject XYLG to loss due to adverse occurrences that may affect that industry or sector. Investors in XYLG should be willing to accept a high degree of volatility in the price of the fund’s shares and the possibility of significant losses.

XYLG engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset, in this case U.S. common equities, and writing a call option on that same asset with the goal of realizing additional income from the option premium. XYLG writes covered call index options on the S&P 500 Index. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price, but continues to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price.
