

FUND OBJECTIVE

For Financial Advisor Use Only – Not for Retail Distribution

The Global X YieldCo & Renewable Energy Income ETF seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Indxx YieldCo & Renewable Energy Income Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

KEY FEATURES

High Income Potential

Invest in Renewables

INDXX YIELDCO & RENEWABLE ENERGY INCOME INDEX

SELECTION POOL

- Minimum market capitalization of \$500M
- Primary listing in a Developed or Emerging Market (excluding India)
- Average daily turnover of at least \$2M over the last 6 months
- The Indxx YieldCo & Renewable Energy Income Index tracks the performance of income-paying renewable energy companies (“RECs”) and companies categorized as YieldCos
- Indxx has identified the following business activities as essential to the underlying theme:
 - i. YieldCos
 - ii. Renewable energy utilities
 - iii. Producers of renewable energy components
 - iv. Producers of biofuels
 - v. Smart grid companies facilitating renewable energy use
 - vi. Companies that install/operate/finance renewable energy systems
- Only companies that derive greater than 50% of their revenues from the above business activities, or that generate greater than 50% of their energy production from renewable energy sources, are eligible for inclusion (“pure-play” companies)
- All eligible pure-play companies with a trailing 12-month dividend yield greater than 2% are included in the final portfolio
- The index includes a minimum of 30 constituents
 - If the final portfolio has fewer than 30 names, then the market capitalization threshold is reduced to \$300million, and the shortfall is met as follows:
 - Adding the highest yielding securities with a yield above 2%, until there are 30 names
 - If the constituent count is still less than 30, then the yield threshold of 2% is relaxed and the highest yielding securities from the selection pool are added, until there are 30 components

WEIGHTING AT SELECTION/REBALANCING

- The index is modified market capitalization weighted:
 - Individual securities are capped at a 6% weight
 - A total weight cap of 40% is applied to all securities with weights greater than 5%, and the weights of all remaining companies are capped at 4.5%
 - The aggregate weight of Partnerships is capped at 25%.
 - If a new constituent is added with a yield of less than 2% for the index to maintain 30 constituents, the weight of that constituent is capped at a 2% weight

REBALANCING

- Quarterly rebalance on the third Friday of March, June, September, and December

*For the complete and current index methodology please refer to the index provider's website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund's investment objectives, risks, and charges and expenses. This and other information can be found in the fund's full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Investments in smaller companies typically exhibit higher volatility. The value of securities issued by companies in the energy sector may decline for many reasons, including, without limitation, changes in energy prices; international politics; energy conservation; the success of exploration projects; natural disasters or other catastrophes; changes in exchange rates, interest rates, or economic conditions; changes in demand for energy products and services; and tax and other government regulatory policies. The Fund is non-diversified.

Investments in yieldcos involve risks that differ from investments in traditional operating companies, including risks related to the relationship between the yieldco and the company responsible for the formation of the yieldco. Yieldco securities can be affected by expectations of interest rates, and investor sentiment towards yieldcos or the energy sector. Yieldcos may distribute all or substantially all of the cash available for distribution, which may limit new acquisitions and future growth. Yieldcos may finance its growth strategy with debt, which may increase the yieldco's leverage and the risks associated with the yieldco. The ability of a yieldco to maintain or grow its dividend distributions may depend on the entity's ability to minimize its tax liabilities through the use of accelerated depreciation schedules, tax loss carryforwards, and tax incentives.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
